

BOTCHED ABORTION REPORTS

Following is a list of apparently botched abortions at abortion clinics. Unless otherwise noted (*self admission* = self admission to hospital), all required transportation to a hospital by ambulance. The events were witnessed and/or videotaped by persons present outside the clinics. In many cases, copies of the 911 phone calls by abortion staff were also obtained, giving a sketch of the patient's condition. The date given is the date of the occurrence, unless denoted by an "r" after the date, indicating it is the date the event was reported. XX indicates day unknown. Obviously, there were other botched abortions during this period which were not witnessed or reported.

2011 - 2012

*Operation Rescue has documented 10 medical emergencies at this Bakersfield abortion clinic between this date and August, 2012, an average of about 1 every 4 months. Further, LifeNews.com reported pm 12/5/17 that in 2017, Operation Rescue has documented 57 medical emergencies requiring ambulance transport from abortion facilities nationwide. Of those, 35, or 61.4% have occurred at Planned Parenthood centers. The above date for 2017 shows only part of these (38 incidents with 23 at Planned Parenthood centers).

**AB911 is our notation for a new website begun in August, 2018 by Cheryl Sullenger of Operation Rescue

NOTE: The LifeNews.com article of 4/26/13 entitled, "911 Calls: California Planned Parenthood Injures Three Women in Abortions," states: Operation Rescue has documented 22 medical emergencies occurring at abortion clinics nationwide since January 1, 2013. In the LifeNews.com article of 8/21/13 it states that since January, 2012, Operation Rescue had documented 32 medical emergencies at Planned Parenthood clinics nationwide. On March 15, 2017, it reported on LifeNews.com that in the 13 months between January 1, 2016 and March 3, 2017, the PP's Westside Health Center abortion clinic in Santa Cruz, CA has called ambulances to the facility 22 times. So the instances recorded above are just the tip of the iceberg.

The data documented above indicates that of the 252 botched abortions requiring emergency medical treatment from 2011 through 2018, 119 or 47.2% occurred at Planned Parenthood clinics. The reader is reminded that these botched abortions are only those observed and recorded. Obviously not all abortion clinics have been observed during all hours they were open, and not all botched abortions requiring transportation to a hospital have been documented.

For a brief report which speaks to the unsafe conditions at many abortion clinics, see www.sba.list.com and click on "Kermit Gosnell is Not an Outlier," and then on "Fact Sheet: Abortion Industry Negligence Nationwide." See also the **Americans United for Life** report: *Unsafe, How the Public Health Crisis in America's Abortion Clinics Endangers Women*, released 12/13/16, available on their website.

A recent study of 54,911 abortions during 2009-2010 obtained by Medi-Cal beneficiaries in California found that 2.1% of the women required additional medical care within 6 weeks after the abortion. If this complication rate were applied to the 1,058,500 legal abortions reported by the Guttmacher Institute for 2011, it would yield 22,228 visits by women within 6 weeks of their abortion to deal with complications. So much for "safe" legal abortion. The authors note two shortcomings of their research. First, their sample included "higher rates of Hispanics, lower rates of blacks, and presumably higher rates of low-income women" than the general population. Second, they used billing codes to identify complications, which "often contain erroneous codes" and using the codes "we could not assess whether any of the complications led to deaths or detect complications not documented by billing codes ... thereby underestimating the complication rate." (See Ushma D. Upadhyay et al., "Incidence of Emergency Department Visits and Complications After Abortion," *Obstetrics and Gynecology*, released online, December, 2014). We also note that this study considers only short-term complications of abortion for the mother. See our report, "Legal Abortion Harms Women," by clicking on Issues and Abortion on our website to learn about abortion's long-term complications.

A special report by Operation Rescue found that from 2011 through May of 2015, records from the Ohio Department of Health reveal that at least 47 abortion related medical emergencies or complications took place at eight abortion facilities illustrating that the above report data for all states just scratched the surface of the problem.

Abortion is not "Reproductive Health Care," but rather anti-reproductive health endangerment. The individual reproduced is killed, and his or her mother subjected to increased risks of physical, psychological and spiritual harm. Medical science has documented the psychological and physical risks of legal abortion for over 30 years.
